

Project Design Phase-II

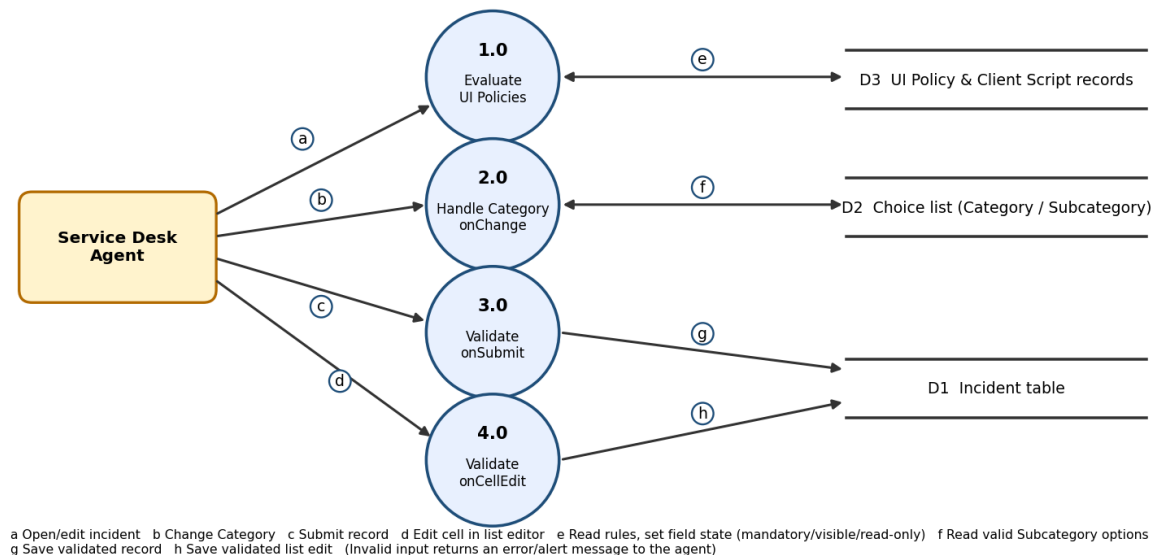

Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-8273
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a visual representation of the information flows within a system. The diagram below shows how the agent's actions on the Incident form and list flow through the UI Policy and Client Script processes, which data stores they read and write, and where validation errors are returned to the user.

Data Flow Diagram (Level 1): Incident Form Data Integrity

User Stories

User stories for the Incident Client Script and UI Policy product:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent	Field State Control (FR-1)	USN-1	As an agent, I want Assignment group and Description to become mandatory when Impact and Urgency are both High, so critical incidents are routed and documented properly.	With Impact = 1 - High and Urgency = 1 - High, both fields show the mandatory indicator and the form cannot be saved without them.	High	Sprint-1
Service Desk Agent	Field State Control (FR-1)	USN-2	As an agent, I want the extra fields to return to normal when the condition is no longer true, so the form does not stay cluttered.	Changing Impact or Urgency away from High removes the mandatory status (Reverse if false).	Medium	Sprint-1
Service Desk Agent	Urgency Field Control (FR-2)	USN-3	As an agent, I want Urgency to become read-only once an incident is Resolved or Closed, so closed records are not altered.	With State = Resolved or Closed, the Urgency field is read-only.	High	Sprint-1
Service Desk Agent	Dependent Field Handling (FR-3)	USN-4	As an agent, I want Subcategory to reset when I change Category, so I never save a mismatched pair.	Changing Category clears Subcategory and the choice list shows only valid options.	High	Sprint-2
Service Desk Agent	Submission Validation (FR-4)	USN-5	As an agent, I want a clear error message if I submit without key fields, so I can fix them immediately.	Submitting with an empty Short description or Category is blocked, an error message is displayed and the form stays open.	High	Sprint-2
Service Desk Agent	List Editing Safety (FR-5)	USN-6	As an agent, I want list edits validated, so I cannot accidentally blank required fields or close incidents from the list.	Inline edits that clear a value or set State to Resolved / Closed are rejected with an alert.	Medium	Sprint-3
Administrator	Maintainability	USN-7	As an administrator, I want all changes captured in an Update Set and documented, so they can be promoted and audited.	Update Set contains all UI Policies, UI Policy Actions and Client Scripts.	Medium	Sprint-3
