

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWUID2026286057
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Field State Control (UI Policy)	Make Assignment group and Description mandatory when Impact = 1 - High and Urgency = 1 - High Show Assigned to and Additional comments for High Impact / High Urgency incidents Restore original field state when the condition is no longer true (Reverse if false)
FR-2	Urgency Field Control (UI Policy Action)	Make Urgency read-only when State is Resolved or Closed Make Urgency editable again when the incident is reopened
FR-3	Dependent Field Handling (onChange Client Script)	Clear Subcategory when Category changes Make Subcategory mandatory once a Category is selected Display an info message prompting for a valid Subcategory
FR-4	Submission Validation (onSubmit Client Script)	Block submission when Short description or Category is empty Show an error message and set g_form.submitted = false Return false to cancel the save
FR-5	List Editing Safety (onCellEdit Client Script)	Reject empty values entered in the list editor Reject State changes to Resolved / Closed from the list editor Always call the callback so the cell exits edit mode

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Clear, concise error and info messages; fields show, hide or lock instantly without a page reload; consistent mandatory indicators on the Incident form.
NFR-2	Security	Client-side rules are advisory only; critical rules must be mirrored by server-side Business Rules / ACLs. Scripts must not expose sensitive data; access is governed by ServiceNow roles (e.g., itil).
NFR-3	Reliability	Scripts guard against isLoading and empty values and contain no unhandled exceptions; every rule is covered by a documented test case.
NFR-4	Performance	No synchronous server calls (GlideRecord / getReference without callback) in form-load or onChange scripts; UI Policies are preferred over scripts wherever possible.

NFR No.	Non-Functional Requirement	Description
NFR-5	Availability	Logic runs in the browser and is available whenever the ServiceNow instance is available; no dependency on external services.
NFR-6	Scalability	Rules are table-scoped, condition-driven and data-independent; new fields or conditions can be added without restructuring, and changes are promoted via Update Sets.
